Default attribute

lemma

The default attribute was introduced for user's convenience, it does not change the result. It is used to shorten and simplify the queries, especially if they contain several tokens with the same attribute (lemma, word, lc etc.) The default attribute will be assigned to all tokens without square brackets, i.e. in quotes only.

full query

can be shortened to

with `default` attribute

(meet [lemma="volcano"] [lemma="summit"] -4 4)

(meet "volcano" "summit" -4 4)

Lemma

[tag="V.*"] [] [word="very"] [word="long"] [word="day"]

[tag="V.*"] [] "very" "long" "day"

word
